I. SYSTEM OVERVIEW

- Live System Link:
http://172.25.116.188:3000/minor_defect_record_system/
- Process Flow

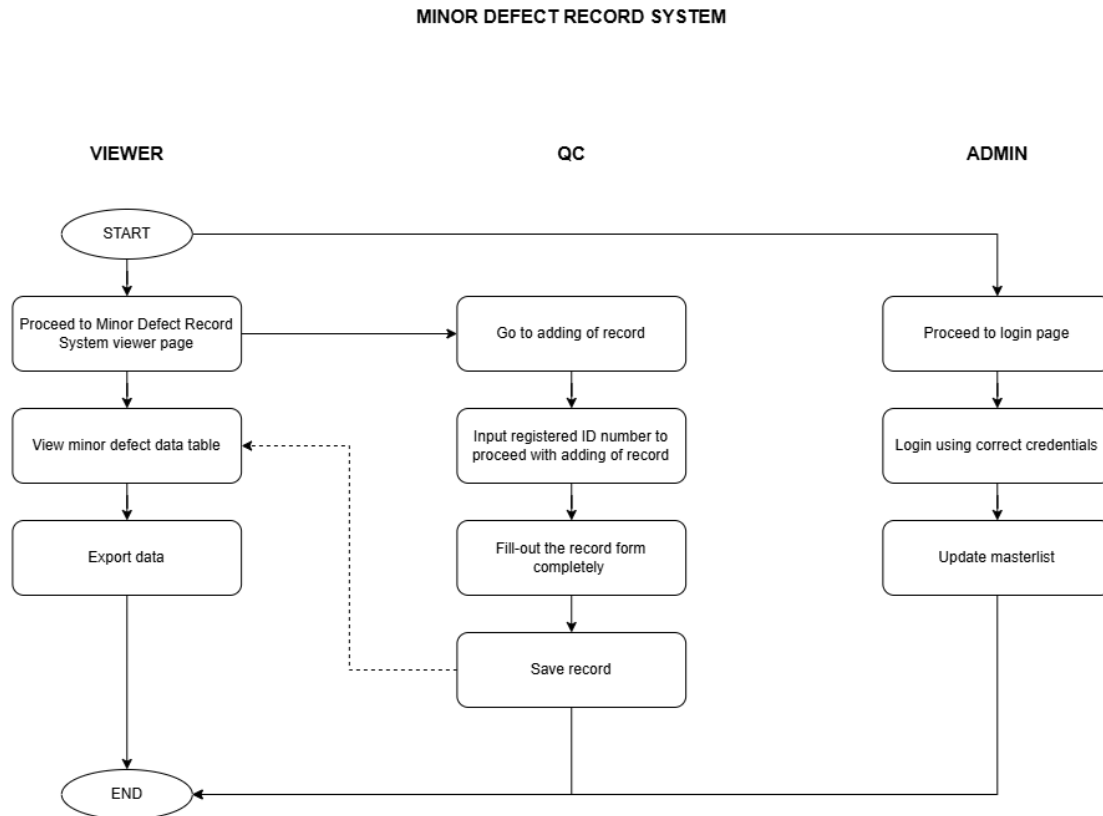

Figure 1. System Process Flow

A web application that provides comprehensive functionality for managing and analyzing minor defects on production lines. Key features include:

- Defect Tracking: Efficiently record and monitor defects per production line.
- Data Management: Capture essential details such as date detected, car maker and model, line number, process, product number, lot number, serial number, defect category, defect details, treatment content, sequence and connector numbers, and personnel involved in repair and verification.
- Trend Analysis: Utilize recorded data to analyze trends and visualize performance metrics.
- Reporting: Generate insightful reports to aid in decision-making and quality control.

This system is designed to streamline defect management and enhance data-driven decision-making through effective tracking and analysis.

II. VIEWER INTERFACE

1. Viewer Page

1.1 At the top of the page, the user will find a set of search fields designed to help them quickly locate specific records. These fields allow them to filter data based on various criteria, making it easier to find relevant defect records based on above parameters. By default, the date from and date to is set to current date. *See Figure 2*

1.2 Below the search fields, the main section of the page features a detailed table displaying the defect records that match the search criteria. This table is organized to provide a clear and concise view of all added defect records.

The table also includes load more to help users to navigate through large sets of records efficiently.

In the lower left of the table, it displays the total count of records. These changes based on the data shown in the table. *See Figure 2*

1.3 To extract the data, click on the Export button. The file will contain the filtered data from the table. The downloaded file will be named based on the date of download. *See Figure 2*

1.4 The Add Record button is accessible only to authorized QC personnel. *See Figure 2*

III. QC INTERFACE

1. New Record Authorization

1.1 Upon clicking on the Add Record button, the access authorization will show. This is to ensure that only registered QC personnel will add defect records.

The user must enter their registered ID number to be able to proceed with adding of record/s. Then, click on the Enter button. See Figure 3

The screenshot shows the 'MINOR DEFECT RECORD SYSTEM' interface. At the top, there are input fields for Line No., Product Number, Lot No., and Serial No., along with an 'Export' button and a search bar. Below these are fields for Date From, Date To, Process, Defect Category, and Defect Details. A blue box labeled '1.1' highlights the '+ Add Record' button. A modal dialog box titled '+ New Record Authorization' is open, prompting the user to 'Enter your registered ID number to proceed with adding a record.' The input field contains '13-0546', and there is an 'Enter' button below it. The background shows a table with defect records.

Figure 3. New Record Authorization Access

1.2 Otherwise, an alert will pop notifying that the ID number entered is not registered. If ID number is needed to be registered, contact IT – System Group for the account registration. See Figure 4

The screenshot shows the same interface as Figure 3, but with an alert dialog box titled 'ID Not Registered' displayed. The alert contains the text 'Please contact IT-System Group to register your ID number.' and an 'OK' button. A blue box labeled '1.2' highlights the alert. The background shows the same defect record table.

Figure 4. ID Not Registered Alert

2. Add Record

2.1 After successful access, the Add Record form will be displayed. See below data type. See table below.

INPUT FIELD	TYPE/CONDITION	DEPENDENT FIELDS
Date Detected	Manual selection	
Line No.	Manual input	Car Maker, Car Model, Process
Group	Dropdown selection	
Shift	Dropdown selection (default to N/A)	
Product, Lot, and Serial No.	Manual input	
Defect Details Code	Manual input	Defect Category, Defect Details, Treatment Content of Defect
Sequence No. and Connector No.	Manual input	
Repaired By and Verified By	Manual input (default to N/A)	

2.2 All fields are required to be filled out; otherwise, the record will not be saved.

In the upper right corner, the name of the user is displayed, indicating that all added records will be attributed to the currently logged-in user. See Figure 5

Note: When the user closes the form, the authorization access modal will prompt again.

2.3 For adding records, the QC personnel may add either a single record or multiple records.

When all fields are filled and the user clicks the Add Record button, the values for Date Detected, Line No., Car Maker, Car Model, Process, Group, Shift, Product, Lot, and Serial No. will be retained. This allows the user to add new records under the same nameplate information.

Note: Upon entering the Line No., the associated Car Maker, Car Model, and Process will be fetched automatically. Similarly, upon entering the Defect Details Code, the corresponding Defect Category, Defect Details, and Treatment Content of Defect will be fetched automatically.

To reset the form, the user must click the Clear All button. See Figure 6

2.2 + Add Record

Minor Defect Record

User: Dotado, Marivic M.

Date Detected * 2025-06-25

Line No. * 5101

Car Maker * SUZUKI

Car Model * YV7 MAIN

Process * Appearance_1

Group * ADS

Shift * N/A

Product Number * N463-67-010A(4)-1

Lot No. * 5998UD

Serial No. * 00014

Defect Details Code * AA1

Defect Category * Exposed Wire/Junction

Defect Details * Junction

Treatment Content of Defect * Add tape

Sequence No. * 14

Connector No. * 6

Repaired By (PO ID No.) * N/A

Verified By (QA ID No.) * N/A

IV. ADMIN INTERFACE

1. Login

1.1 Input the correct credentials to access the master list. See Figure 7

Figure 7. Login Page

2. Defect Category, Details, and Treatment Content

2.1 Click on the Defect Category, Details, and Treatment Content tab to view the defect category and details.

To add defect details, click on the Add Defect Details button. Fill-out the needed details (defect code, defect category, defect sub code, defect details, and defect treatment), then save the record. See Figure 8

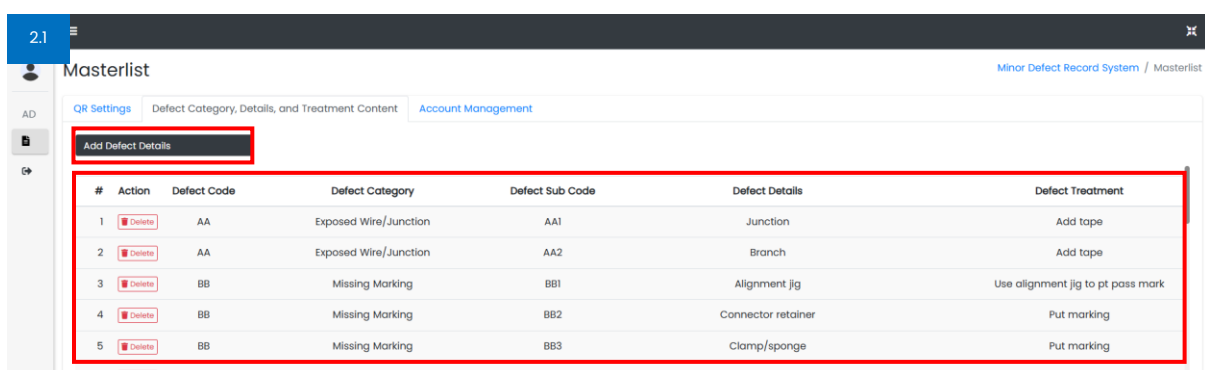

Figure 8. Defect Content Master List

3. Account Management

3.1 Click on the Account Management tab to view the list of registered accounts.

To add account, click on the Add Account button. Fill-out the needed details (username and role), then save the record. See Figure 9

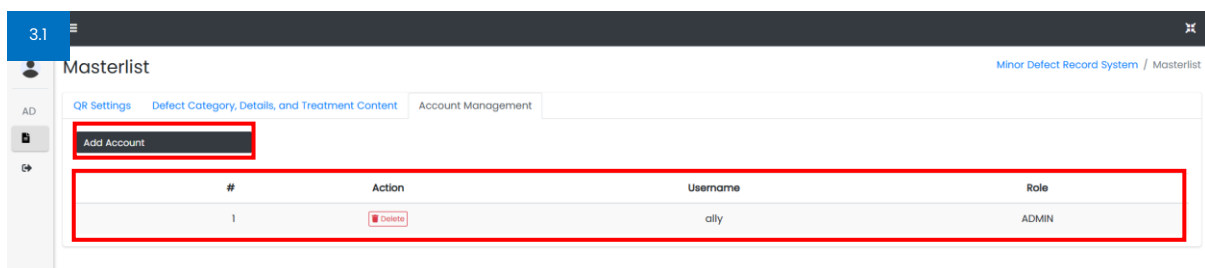

Figure 9. Accounts Master List
